SKILL

TECHNICAL SKILLS

- **Programming:** C, C++, Python
- **AI/ML & Data Science:** OpenCV, PyTorch, Pandas, Scikit-learn, AI/ML Model Implementation
- **Frontend:** HTML, CSS, JavaScript, React
- **Database:** MySQL, Firebase
- **Tools:** Git, GitHub, Arduino, Unity
- **Concepts:** Data Structures & Algorithms, IoT Fundamentals
- **Quality Assurance:** Manual QA

SOFT SKILLS

- Problem-Solving
- Team Collaboration
- Communication Skills
- Time Management

CERTIFICATIONS

- React Training Certificate
- Django Workshop Certificate
- Pandas Course (Kaggle)
- HTML Cours Certificate
- IEEE NCIT Bit by Bit: C Challenge Participation Certificate (2025)

EDUCATION

BACHELOR OF ENGINEERING IN COMPUTER ENGINEERING

Nepal College of Information Technology (NCIT), Kathmandu
Dec 2022 – Present

Higher Secondary Education (+2 Science)

Mithila Institute of Technology (MIT), Janakpur
2020 – 2022

Grade: 3.01/4.0

LANGUAGES

- English Nepali Hindi

PROFESSIONAL SUMMARY

- Computer Engineering undergraduate skilled in React, JavaScript, Python, Firebase, and AI/ML fundamentals.
- Experienced in developing web applications, IoT systems, and machine learning projects including pharmacy management and real-time detection systems.
- Basic understanding of Data Structures and Algorithms, and database management with hands-on experience in Git and Firebase.

PROJECTS

Pharmacy Management System (College Group Project)

Technologies: HTML, CSS, JavaScript, Firebase (Authentication & Firestore)

- Developed a pharmacy management system with authentication and inventory management.
- Used Firebase Authentication and Firestore for secure cloud-based data handling.

Age and Gender Detection

Technologies: Python, OpenCV, PyTorch

- Built a real-time AI-powered age and gender detection system using Python, OpenCV, and PyTorch with webcam-based face detection and prediction capabilities.
- Implemented webcam-based face detection and prediction.

Product Catalog App

Technologies: React, JavaScript, HTML, CSS

- Developed a responsive web application to display and manage product catalogs.
- Implemented features including search, filtering, and dynamic rendering of product details.

IoT-Based Obstacle Detection Car

Technologies: Arduino, C++, IoT

- Designed and built a smart car prototype capable of detecting obstacles using ultrasonic sensors.
- Integrated a buzzer and LED bulb to provide real-time alerts upon obstacle detection.

Snake Game

Technologies: Unity, C#

- Created a classic Snake Game featuring interactive gameplay and score tracking.
- Designed game mechanics, UI, and controls using Unity and C# programming.
